

MAKE SURE SOLUTIONS FOR BANK NOTES

Counterfeits that Impact a Nation's Economy

The goal of security marks on bank notes is to safeguard the value of the currency, a foundational asset of a country's economy.

This reality makes bank notes a prime target for counterfeiters. For the top levels of organized crime, the motive is profit,

while others seek to undermine the national security of an enemy by flooding the market with fake money.

Some currencies are now facing a challenge of global proportions, which requires the most sophisticated protection available: covert taggants.

MAKE SURE SOLUTIONS FOR BANK NOTES

Inksure's cutting-edge covert technology has over a decade of proven success in implementing tens of billions of covert features worldwide, including one of the world's most secure markers for bank notes.

How the Technology Works

Inksure enhances the existing security of a bank-note by imprinting a covert, forensic-level taggant onto the note, which is invisible to human or electronic eyes. The Inksure taggant reveals its presence only to a small automatic reader configured by Inksure, which signals within a split second that the bill is either authentic or a counterfeit. Due to the unique formulation of Inksure taggants, there are no false readings.

The Inksure Advantage

- The Inksure bank-note mark is a separate class of taggant, dedicated exclusively to currency authentication.
- Inksure taggants are robust and durable, providing forensic-level evidence even if the bank note suffers damage or physical destruction.

- Integrating Inksure's patented SortSure reader into existing bank-note sorting machines enables authenticity checking simultaneously with sorting by denomination.

The Inksure Track Record

Inksure successfully tested the ability of Inksure taggants in safeguarding high-value bank notes with a central bank responsible for that currency. The testers reported successful integration of Inksure's technology with their automated sorting system. Bank notes were sorted with 100 percent accuracy, while all counterfeit notes mixed in with the genuine bills were identified and removed.

Inksure specialists stand ready to advise you on the integration of this taggant technology into your bank-note security arsenal, for unparalleled protection.
