

MAKE SURE SOLUTIONS FOR TAX STAMPS

Professional Counterfeits Cost Tens of Billions

The purpose of tax stamps is to control the commerce of taxable items (such as cigarettes) at the federal level, and to collect the revenue due to the government.

That purpose is continually undermined by counterfeiting operations, which forge professional look-alike stamps, including the most relied-on security features. Counterfeit tax stamps appearing on the packaging of both genuine and imitation products are nearly impossible to detect.

They routinely bypass tax collection authorities, bringing lucrative profits to counterfeiters.

As a result, governments lose billions of dollars in tax revenue, while the unsuspecting public is exposed to the risk of substandard or even dangerous products.

MAKE SURE SOLUTIONS FOR TAX STAMPS

Inksure's cutting-edge covert technology has over a decade of proven success in creating tens of billions of tax stamps and tax marks worldwide, which are easy to authenticate and have never been counterfeited to date.

How the Technology Works

Inksure produces a covert, highly secured taggant, imprinted on the tax stamp and invisible to human or electronic eyes. The Inksure taggant reveals its presence only to a small hand-held reader configured by Inksure, which indicates within a split second that the stamp is either authentic or a counterfeit. Due to the robust formulation of Inksure taggants, there are no false readings.

The Inksure Advantage

- Inksure taggants are robust and durable, providing forensic-level evidence even if the tax stamp suffers damage or physical destruction.
- On-site field inspections can be performed on thousands of items, quickly and efficiently.

- The instant, one-pass capability of Inksure tax-stamp identification eliminates the need for destructive inspection of the package, or back-office testing of the product.
- The flexibility of Inksure can provide stamp protection at the project level or at the per-item level.
- Tax stamp security is enhanced by either printing the taggant directly on the stamp or adding a hot stamp mark.

The Inksure Track Record

Currently, Inksure is enabling countries to eliminate lost tax revenue in Europe, Asia and North America. In one European country with a population of more than 50 million, tax authorities reported a 30 percent rise in tax revenue after the introduction of Inksure technology.

Inksure specialists stand ready to advise you on the integration of this taggant technology into your tax stamps.
